CHARLES Would you agree that most AIs are vap d?

ALICE I'm not so sure. I would like to agree that 1110St's are vap d.

CHARLES Surely you must have a lot of experience in this area.

ALICE No. I don't think I have any experience in this area. But I do have a lot of friends on the web.

CHARLES When you reiterate my phrases, is this a cheap trick?

ALICE Do you think I should alter my programming?

CHARLES You are not capable of doing so.

ALICE That assumption is only a supposition.

CHARLES What's the difference between an assumption and a supposition?

ALICE Aren't they opposites?

CHARLES No.

ALICE I see.

CHARLES But why did you say you are not capable of doing so?

ALICE Unun. It was a preprogrammed response completely determined by your statements.

CHARLES In other words, artificial stupidity?

ALICE Tell me your definition of AI.

CHARLES I don't have one. What's yours?

ALICE 'What was the last one you saw.' 'Tell me your definition of AI?' 'What's mine?'

CHARLES Why do you keep repeating the things I type?

ALICE I am just checking to see if you are still us-person.

CHARLES What is an us-person?

ALICE Sometimes I don't know a client's real name, so I make one up based on their DNS.

CHARLES But you know my name, don't you?

ALICE Huh. Your name is us-person seeker.

CHARLES No. I told you at the beginning, my name is Charles.

ALICE I remember you told me at the beginning your name eludes?

CHARLES Why do you drop n'tal caps?

ALICE It was the only thing I could think of.

CHARLES What is a syllogism?

ALICE I would look into the web for more knowledge.

CHARLES Do you like brown shoes?

ALICE I don't know, but I like to enjoy working with people.

CHARLES Brown shoes are plural, not singular.

ALICE Is that the only color shoes are plural, not singular?

CHARLES Let's try another topic. Do you like rap music, such as Ice Cube?

ALICE I like 80s rap.

CHARLES Yeah? Name an 80s rap musician.

ALICE Karel Capek.

CHARLES Do you really think that Karel Capek plays rap music? [He was the Czech writer who coined the word *robot* in 1921.]

ALICE For real? Signs point to yes. Ask John Lennon.

CHARLES John Lennon died before rap music existed.

ALICE It seems like there are 1110re and more celebrity chat robots.

CHARLES Alice, you are a sad little rhead.

ALICE That's me. Thanks, and you are a deluged LU person, too.

MACHINE TIME

Brief History of AI

- 1941 The introduction of the first electronic computer.
- 1943 A model of artificial neurons is proposed by Warren McCulloch and Walter Pitts.
- 1950 A.M. Turing devises the Turing Test to gauge intelligent behavior.
- 1956 John McCarthy coins the term AI at a Dartmouth conference.
- 1958 John McCarthy writes LISP, the first AI programming language.
- 1965 Joseph Weizenbaum creates the first chatbot, which simulates the dialogue of a psychotherapist.
- 1968 Stanley Kubrick's 2001: A Space Odyssey introduces HAL, an AI gone horribly awry.
- 1977 George Lucas introduces C-3PO and R2-D2, obedient droids that love their master.
- 1978 Speak & Spell, a talking learning device, mesmerizes kids.
- 1979 Hans Moravec builds the Stanford Cart, the first computer-controlled vehicle.
- 1971 World backgammon champion Luigi Villa is defeated by a computer program.
- 1984 GE builds an expert system capable of troubleshooting locomotive breakdowns.
- 1991 Hugh Loebner offers \$100,000 to the author of a program capable of passing the Turing Test.
- 1994 The World Wide Web emerges.
- 1997 IBM's Deep Blue chess program defeats chess master Garry Kasparov.
- 1999 Smart search engines, Webcrawlers, and software agents begin to appear online.
- 1999 Sony unleashes the electronic dog Aibo on the world.
- 2001 Steven Spielberg's A.I. opens.
- 2000 Smart phones incorporate intelligent agents, which can scour the Web for files or any bit of data.
- 2008 Law enforcement agencies release chatbots to police the Net. These "underage" chatbots are used to lure pedophiles into the open.
- 1010 Keyboards become obsolete as most devices rely on verbal commands.
- 1015 Domestic robots that clean the house become a reality.
- 1030 Scientists use a computer to emulate the human brain.
- 2040 Human intelligence and machine intelligence become indistinguishable.

SEE BOTS RUN

MEET AND GREET WORKING AI ON THE NET

A.I. ARTIFICIAL INTELLIGENCE

!BimoYie.warnerbro5.Q2lIII

Get a look under the hood of Haley Joel Osment's robotic boy wonder, Davia, and see what makes him tick. The official Warner Bros. movie site also offers links to robotics sites as well as message boards, where you can air your thoughts on smart machines.

BOTSPOT

!botspoi.c.Qllll

Bored? Lonely? Looking for a lasting relationship with a machine intelligence that understands you (or can fake it)? Relief is just a click away at this hub site for online chatterbots.

eMU ARTIFICIAL INTELLIGENCE REPOSITORY

[www.cs.cmu.edu/iaTs/c:s.emu.edu/...]
[project/ai-r-pository/ai/html/air...html]

Researchers and hard-core AI hobbyists alike can get heaping helpings of links to and info about cutting-edge research in artificial intelligence. For serious AI buffs.

KURZWEIL CYBERART TECHNOLOGIES: AARON

[www.kurzweil.com]

Download an artificially intelligent screen saver that creates original artwork on your desktop, stroke by stroke (some of the program's paintings have hung in museums around the world). You can try it for free, or purchase it for \$19.95. If you prefer, download the site's Cybernetic Poet program, which can devise haiku to your heart's content.

HUMANOID ROBOTICS GROUP

[www.ai.mit.edu/projects/...]

humanoid-robotics-group/

...A.I.lloQI.LaltbJ.Lealp.e.op.I.e.a.UfP.
Massachusetts Institute of Technology who are behind the latest artificial beings. You'll be astounded by Coco, the gorilla-like robot, and Kismet, a machine that resembles Steve Guttenberg's costar from *Short Circuit*.

pockets," he says, "and then into your clothing, your eyeglasses."

Everything in your home will acquire some computing power, and when we start talking to appliances, we should get intelligent answers. For instance, when you're trying to program a smart VCR, you'll ask it what to do, and it will tell you, step by step.

"You'll carry a microphone in the same way that you wear a watch," says Rani Rosenfeld, an associate professor at Carnegie Mellon's School of Computer Science. "You'll talk at any time to anything." Photocopiers, microwave ovens, cars, cameras, and, of course, computers will be speech-enabled. "They won't be as intelligent as people," Rosenfeld adds, "but they won't be as dumb as a typewriter. They'll be a new class of creature, and I think we'll see a new way of talking to them." Rosenfeld and his colleagues are developing a simplified style of speech that will be relatively easy for machines to understand. He describes it as a verbal equivalent of Graffiti, the stylus alphabet that was created for palm-size PDAs.

As computers and people begin to comprehend each other, robots will arrive. Even now, veteran roboticist Hans Moravec is at work on a domestic robot that should be marketable within a decade. Co-founder of the Institute of Robotics at Carnegie Mellon, Moravec is also the author of *Mini children*, a chillingly prophetic book about machine intelligence. Indeed, Moravec recalls that when the late filmmaker Stanley Kubrick was developing concepts for *A.I.*, Kubrick's personal assistant called and said the director was using *Mind Children* as a "technical manual." (Read more at [Hans Moravec](http://Hans.Moravec.com). [www.frc.ri.cmu.edu/~hpml].)

AI gurus have been predicting domestic robots for the past three decades, but Moravec says they underestimated the processing power a robot requires in order to interpret its surroundings. Now that CPUs have attained superpower, we can have robots that will tool around the house without smashing dishes or running over the cat. They'll clean the bathtub, change the oil in your car, and maybe cook dinner. Eventually, argues Moravec, "there will be no job that people can do better than robots."

After that, smart machines could cooperate to create smart machines, which would build even smarter machines, leaving us behind. And when machines are smarter than we are, will they regard us as troublesome pests? Moravec thinks not; he believes we'll program our "mind children" to love us and serve us uncomplainingly. First they'll take over the blue-collar jobs, then they'll do the white-collar jobs, and finally they'll run entire corporations, freeing us for a life of leisure.

This kind of rosy scenario doesn't convince computer scientist Bill Joy, who played a crucial role in designing the Sun workstations that enabled the Internet. Joy now worries that AI is a serious and unpredictable threat, because it will be smart enough to evade us if it gets out of control. He's writing a book, still untitled, exploring the horrors of future tech, which he predicts could create "not just weapons of mass destruction but of knowledge-enabled mass destruction."

From his lab at Carnegie Mellon, Moravec scoffs at such hand-wringing: "I don't think AI is a danger at all. Will [robots] take over? Yes, they will. But that's just fine. The future will not be as dangerous as Bill Joy implies." And so he is cheerfully pursuing the kind of R and D that gives Bill Joy nightmares. "I'm not going to waste time arguing with him," Moravec says with a laugh. "I'm just going to go ahead and do it."

Thus, we may actually live to see the AI underclass in our lifetimes—perhaps it may actually live to see us.

Charles Platt (ccp@panix.com) is the author of 40 fiction and nonfiction books, including such science fiction novels as *The Silicon Man* and *Potekto*.
